## Market Commentary

Despite escalating rhetoric surrounding a Greek default, European yields have continued to fall. German Bund yields are negative out to the 9-year maturity, and the 10-year Bund is currently testing the zero threshold. However, positive first quarter earnings results have provided ample distraction from the unfolding Greek drama. According to data compiled by Thomson Reuters, 61% of European companies have met or exceeded earnings expectations. Economic data releases, however, have remained mixed, though industrial activity in Germany and the peripheral Eurozone countries has continued to accelerate. In the US, underwhelming economic data, including a third successive week of increasing jobless claims, were overlooked by markets as earnings results have been particularly strong. In a move designed to ease credit conditions and stimulate the Chinese economy, the People's Bank of China cut the reserve ratio requirement by one percentage point. In spite of this, the manufacturing purchasing managers' index fell to 49.2, indicating continued contraction.
