Market Commentary

US equity indices rose slightly over April, and the S&P 500 ended the month up 0.4%. Meanwhile, first-quarter corporate earnings results trumped expectations as weekly jobless claims hit their lowest level since 1973. Accordingly, New York Federal Reserve president, William Dudley, remarked that given the “mostly favourable” economic conditions, the Fed remains cautious about raising interest rates. With the upcoming referendum on European Union membership, uncertainty continues to hang over the UK. The Treasury published a report suggesting a withdrawal from the common market could shrink the UK economy by 6.5% over 15 years. Meanwhile, the MSCI UK rose 1.5%. In spite of major oil producers' failure to agree a production freeze, falling US production and a strike by Kuwait's energy workers more than offset disappointment and supported the continued rally in the commodity.
